

IPCC Tier 2 Livestock GHG Uncertainty Calculator

Pre-Flight Questionnaire — GMH Uncertainty Translator

CIAT / CGIAR Alliance — ClimateActionNetZero

May 2026

Version 1.0 — May 2026

Fill this out before opening the Translator

Fill this out **before** opening the Translator on claude.ai. When you start the chat, paste this whole filled page as your first message — Claude will use it to skip the warm-up questions and go straight to inspecting your data.

Save this file as `my_inventory_questionnaire.docx` and edit your answers in place. Italic guidance lines can be left as-is.

1. Country and inventory year

Country: \ Inventory year being prepared:

2. IPCC guidelines version

Tick one:

- ☐ **IPCC 2006 Guidelines** (still the default reporting requirement in many countries)
- ☐ **IPCC 2019 Refinement** (newer; updated emission factors, more manure systems)

If unsure, ask your national focal point or pick 2006 — the app accepts both.

3. Cattle sub-categories

List the sub-categories your inventory splits cattle into and the approximate head count of each. You can use any names — Claude will map them to the app's controlled vocabulary.

Sub-category name	Head count	Sex (M/F/mix)	Age class

Example: dairy cows / 500,000 / F / adult / breeding bulls / 12,000 / M / adult

4. Manure management

For each sub-category, roughly what % of manure goes to each system? Per sub-category, the % must sum to 100. Recognised systems:

- pasture, daily_spread, solid_storage, solid_storage_covered*, dry_lot, deep_bedding
- liquid_slurry, lagoon, composting, anaerobic_digester*, aerobic_treatment*, burned_for_fuel*

*available only when IPCC version = 2019 Refinement.

Sub-category	System 1 (%)	System 2 (%)	System 3 (%)	System 4 (%)

Example: dairy cows: pasture 40%, solid_storage 35%, liquid_slurry 15%, lagoon 10% (sums to 100).

5. Data fields you have

Tick the parameters for which you have country-specific values. Unticked parameters will be filled with IPCC defaults and flagged amber in the app's QA/QC tab for review.

Activity data (the population number)\

- ☐ Animal population (head count) — **strongly recommended**

Animal characteristics\

- ☐ Body weight (kg) — **BW**
- ☐ Mature body weight (kg) — **MW**
- ☐ Daily weight gain (kg/day) — **WG**
- ☐ Fraction of females calving in the year — **pct_calving**

Production (dairy only)\

- ☐ Daily milk yield per lactating cow (kg/day) — **Milk**
- ☐ Milk fat content (%) — **Fat**
- ☐ Milk protein content (%) — **MilkPR**

Feed\

- ☐ Digestible energy of feed (% of gross energy) — **DE**
- ☐ Crude protein in feed (%) — **CP**

Climate (optional)\

- ☐ Mean winter temperature (°C) — **Tw**

IPCC equation coefficients (*rarely measured locally; leave unticked unless your country has a published value*)\

- ☐ **Cfi, Ca, C, Cp, Ym, Bo, ASH, UE**
- ☐ **N₂O emission factors (EF3_PRP, EF3_S, EF4, EF5)**
- ☐ **Volatilisation / leaching fractions (Frac_GASMS, Frac_LEACH_H, Frac_GASM_PRP, Frac_LEACH_PRP)**

6. Where do your uncertainty estimates come from?

Tick one (or combine if different sources for different parameters):

- ☐ **(a) No uncertainty estimates** — use IPCC suggested $\pm\%$ from the catalogue
- ☐ **(b) Expert judgement $\pm\%$** — I'll write a single $\pm\%$ next to each value

- ☐ (c) **Measured confidence intervals** — I have explicit lower/upper bounds (or $\pm$ with sample size)
- ☐ (d) **A mix** — I'll specify per parameter

7. Time series (optional)

- ☐ I have annual data for **5 or more years** that the app can use to estimate correlations between parameters.

Earliest year: **Latest year:**

Parameters covered (tick):

- ☐ N ☐ BW ☐ MW ☐ WG ☐ Milk
- ☐ Fat ☐ pct_calving ☐ DE ☐ CP ☐ MilkPR

8. File(s) you'll upload

List the file names and a one-line description of what's in each.

1. \[6pt] 2. \[6pt] 3.

9. Anything else you want Claude to know

Free-form note: anything unusual about your data, sub-category definitions specific to your country, or known quirks. Optional.

..... \[8pt] \[8pt] \[8pt]

That's it. Paste this filled page into the Translator and attach your files. Claude will take it from here.
