

Pre-flight questionnaire — GMH Uncertainty Translator

Fill this out **before** opening the Translator on claude.ai. When you start the chat, paste this whole filled page as your first message — Claude will use it to skip the warm-up questions and go straight to inspecting your data.

Save this file as `my_inventory_questionnaire.docx` (or `.txt`) and edit your answers in place. Lines starting with `>` are guidance and you can leave them.

1. Country and inventory year

- **Country:** _____
- **Inventory year being prepared:** _____

2. IPCC guidelines version

Tick one:

- ☐ **IPCC 2006 Guidelines** (still the default reporting requirement in many countries)
- ☐ **IPCC 2019 Refinement** (newer; updated emission factors and adds more manure systems)

If unsure, ask your national focal point or pick 2006 — the app accepts both.

3. Cattle sub-categories

List the sub-categories your inventory splits cattle into and the approximate head count of each. You can use any names — Claude will map them to the app's controlled vocabulary.

Your sub-category name	Approximate head count	Sex (M/F/mixed)	Age (adult / 1–3yr / calf)

Example: | dairy cows | 500,000 | F | adult | | breeding bulls | 12,000 | M | adult | | heifers (1–3yr) | 60,000 | F | 1–3yr |

4. Manure management

For each sub-category, roughly what % of manure goes to each system? Per sub-category, the % must sum to 100. The app accepts these systems:

- **pasture** (animals defecate directly on grazing land)
- **daily_spread** (manure collected then spread on fields the same day)
- **solid_storage** (uncovered pile, 1+ month)
- **solid_storage_covered** (covered pile — 2019 Refinement only)
- **dry_lot** (concentrated bare-soil paddock)
- **deep_bedding** (litter pack, >1 month)
- **liquid_slurry** (tank/lagoon, anaerobic)
- **lagoon** (anaerobic open lagoon)
- **composting** (aerobic, turned)
- **anaerobic_digester** (biogas — 2019 Refinement only)
- **aerobic_treatment** (forced aeration — 2019 Refinement only)
- **burned_for_fuel** (dung cake / firewood substitute — 2019 Refinement only)

Sub-category	system 1 (%)	system 2 (%)	system 3 (%)	system 4 (%)

Example: dairy cows: pasture 40%, solid_storage 35%, liquid_slurry 15%, lagoon 10% → sums to 100 (OK)

5. Data fields you have

Tick the parameters for which you have country-specific values. Anything you leave unticked will be filled with the IPCC default (and flagged in the app's QA/QC tab as needing review).

Activity data (the population number): - ☐ Animal population (head count) — **strongly recommended**

Animal characteristics: - ☐ Body weight (kg) — BW - ☐ Mature body weight (kg) — MW - ☐ Daily weight gain (kg/day) — WG - ☐ Fraction of females calving in the year — pct_calving

Production (dairy only): - ☐ Daily milk yield per lactating cow (kg/day) — Milk - ☐ Milk fat content (%) — Fat - ☐ Milk protein content (%) — MilkPR

Feed: - ☐ Digestible energy of feed (% of gross energy) — DE - ☐ Crude protein in feed (%) — CP

Climate (optional, refines methane calculation): - ☐ Mean winter temperature (°C) — Tw

IPCC equation coefficients (rarely measured locally — leave unticked unless your country has a published value): - ☐ Cfi, Ca, C, Cp, Ym, Bo, ASH, UE - ☐ N₂O emission factors (EF3_PRP, EF3_S, EF4, EF5) - ☐ Volatilisation/leaching fractions (Frac_GASMS, Frac_LEACH_H, Frac_GASM_PRP, Frac_LEACH_PRP)

6. Where do your uncertainty estimates come from?

Tick one (or combine if different sources for different parameters):

- ☐ **(a) No uncertainty estimates** — please use IPCC suggested ±% from the catalogue
- ☐ **(b) Expert judgement ±%** — I'll write a single ±% next to each value
- ☐ **(c) Measured confidence intervals** — I have explicit lower/upper bounds (or ± with sample size)
- ☐ **(d) A mix** — I'll specify per parameter

7. Time series (optional)

- ☐ I have annual data for **5 or more years** that the app can use to estimate correlations between parameters.
 - Earliest year: _____ Latest year: _____
 - Parameters covered (tick): ☐ N ☐ BW ☐ MW ☐ WG ☐ Milk ☐ Fat ☐ pct_calving ☐ DE ☐ CP ☐ MilkPR

8. File(s) you'll upload

List the file names and a one-line description of what's in each.

1. _____
2. _____
3. _____

9. Anything else you want Claude to know

Free-form note: anything unusual about your data, sub-category definitions specific to your country, or known quirks. (Optional.)

That's it. Paste this filled page into the Translator and attach your files. Claude will take it from here.
